All the file transfers using -f , -d, -L, do use ifdh internally. The default is to let ifdh choose the method it thinks best . The --use_gftp flag is supposed to force ifdh to use gridftp for transfer from the worker node back out, if the -L option is ignoring this flag its a bug. I will investigate.

Checking the generated wrapfile, there are some ifdh inconsistencies that need to be fixed. Will do so now.
